IaaC Tools — Recovery Suite

Resilience Intelligence for AWS

1. Executive Summary

IaaC Tools – Recovery Suite transforms AWS disaster recovery into a proactive, AI-assisted resilience system. It verifies, predicts, and restores your cloud infrastructure — faster, safer, smarter. Designed for enterprises that cannot afford uncertainty in their recovery capabilities.

2. The Problem

Cloud recovery remains reactive, manual, and often untested. Backups are fragmented, audits are incomplete, and AWS platform evolution silently invalidates old recovery procedures. When disaster strikes, many organizations discover their recovery plans are theoretical.

3. The Solution — Recovery Intelligence Layer

The Recovery Suite introduces an integrated intelligence layer combining Audit, Recovery, and AI Sentinel systems into a continuous feedback loop that ensures recoverability is never lost.

Core Components:
• Audit Pipeline (A1–A7): Integrity verification from backup to IAM compliance.
• Recovery Pipeline (R1–R6): Guided recovery up to full account rebuild.
• AI Sentinel: Learns from AWS evolution, detecting resilience decay.

Capability	Description	Business Value
■ S3 Audit Engine	Deep inspection of all backup phases and manifests	Detects backup gaps early
■ Snapshot + Full-Volume Checks	Validates data recoverability	Guarantees usable backups
■ JSON + PDF Reporting	Executive & technical transparency	Auditable compliance trail
■ AI Sentinel	Policy drift detection and AWS upgrade adaptation	Future■proofs resilience
■■ Multi■Region Recovery	Orchestrates full account or region rebuilds	Reduces downtime and loss
■ IAM & Policy Validation	Verifies privileges and AWS limits	Prevents permission lockouts

5. Market Differentiation

Unlike conventional backup tools, the Recovery Suite predicts resilience degradation, integrates natively with AWS IAM, and validates recoverability continuously. Its SaaS-ready design positions it as the backbone for Managed Service Providers offering cloud continuity services.

7. Proven Results

Metric	Result
Backup completeness	100% verified across 12 recovery runs
Audit automation time	↓ 83% vs manual verification
Recovery readiness	Continuous validation every 24h
Cost reduction	–27% storage inefficiency detected

8. Target Market

• Enterprise Legal & Finance Firms
• Cloud■first companies
• Managed Service Providers (MSPs)

9. Roadmap Snapshot

Q4 2025: AI Sentinel v2 – dynamic policy mapping.
Q1 2026: Full multi■tenant SaaS deployment.
Q2 2026: Autonomous ‘Phoenix’ full■account restore demo.

10. Investment Proposition

Funding goal: Seed to Series■A scale for infrastructure expansion and SaaS rollout.
Revenue model: subscription■based resilience scoring platform.
Ask: partners and investors ready to pioneer autonomous recovery intelligence.

Join us in building the world’s first self■healing AWS recovery intelligence layer.
